

Task Title: Calculating Electrical Service Size

OALCF Cover Sheet – Learner Copy

Learner Name:			
Date Started (m/d/yyyy):			
Date Completed (m/d/yyyy):			
Successful Completion	: Yes No		
Goal Path:	Employment	Apprenticeship	
Secondary School	Post Secondary	Independence	

Task Description: Read to answer questions about electrical service, and calculate the electrical service size for homes and other buildings.

Main Competency/Task Group/Level Indicator:

- Find and Use Information/Read continuous text/A1.2
- Find and Use Information/Interpret documents/A2.1
- Understand and Use Numbers/Use measures/C3.2

Performance Descriptors: See chart on last page

Materials Required:

- Pencil/paper and/or digital device
- > Calculator

Learner Information

Electricians calculate the electrical service size for homes. Service size is the amount of electricity (measured in amperes (amps)) that a house requires. The electricity enters the house through a fuse or breaker panel; the panel is rated for the service size calculated (e.g. 60, 100, 120, 150, 200 amps).

Electricians take into consideration the size of the home, the number of plugs, lights and appliances requiring electricity and the minimum legal service size. They also read the Canadian Electrical Code to determine maximum items/load on a circuit.

Service size is based on 2 factors: calculated load and minimum service size.

The calculated load is the sum of all the loads. A load is anything (a resistor) powered by electricity such as plugs, lights, stoves, dryers and furnaces; light switches are not included in the calculation. Minimum lights, switches and plugs are listed in the Canadian Electrical Code and are based on the room type and size as well as the square meters of the house. The basic load for a house (up to 90 m2) is 5,000 watts; other resistors (such as a stove) are added to this to determine the total wattage.

The minimum service size is based on the square meters of the house. It is legal (and sometimes preferred) to have a larger service size than required (so more items requiring electricity can be added later) but it is illegal to install a smaller service size than required.

Work Sheet

Task 1: What is service size, and what is it measured in?

Answer:

Task 2: List four examples of a load.

Answer:

Task 3: What is the basic load for a house measuring 90 m² or smaller?

Answer:

Task 4: If Amperes (amps) = Total Watts/Volts, calculate the total amps required for the following service:

- Basic load = 5,000 watts
- Range (stove) = 6,000 watts
- Dryer = 1,000 watts
- Service = 240 volts

Answer:

Task 5: Use the Service Size table (partial) below to determine the minimum legal service size for a house that is 84 m². Write your answer in a full sentence below.

Sq. Meters	Minimum	Include basement
	Service Size	dimensions in
	(amps)	calculation
Less than 80	60	No
80 - 90	100	No
90 - 180	120	Yes (75%)

Answer:

Task Title: CalculatingServiceSize_A_A1.2_A2.1_C3.2

Scan the Electrical Rules below.

- Rule 12–4,000: A maximum of 12 outlets may be connected to a circuit. These may be plugs (excluding special ones in the kitchen or for appliances such as a refrigerator) or lights or any combination. It is better to have a circuit contain both lights and plugs. Light switches do not count as part of the 12. It is encouraged that 10 (or even 8) plugs or lights be on any circuit but 12 is the legal maximum. Count a single or duplex receptacle (plug) as one outlet.
- Rule 2-316 and 30-502: The Electrical Code requires at least one light, controlled by a switch for the dining room, den and living room.
- Rule 26-712(a)(c) requires that a receptacle (plug) be no further than 1.8 m from an appliance (e.g. lamp, television).

Task 6: A house has a living room, a dining room and a den. Both the living room and the den have 4 receptacles, and the dining room has 3 receptacles.

a) Using the information provided in the "Electrical Rules", calculate the number of lights, plugs and switches required for the three rooms.

Answer:

b) Can the three rooms be put on one circuit? Explain your answer.

Answer:
